

Omilen IT Solutions, Customized IT solutions for the real needs of clients, provides business solutions as a software factory, outsourcing and services in consultancy.

We have a group of professionals trained in different areas at the University of Buenos Aires, with more than five years of experience in providing consulting services.

We adapt to our customer needs because we think about him as our partner. We believe that adding value to your business is a priority for us, as well as building a relationship based on mutual trust.

Vision

Our vision is to become strong in the implementation of new technologies, aspiring our customers think of us as partners, consolidating the company in the IT market.

Mission

To bring solutions to our clients using the technology that better solves their problems, involving them in the development process and shaping together the business solution. Finding the balance between technology, needs and cost, without never compromising quality.

Values

Our potential lies in its versatility, experience and knowledge we have as a group and as individuals. Our core values are:

- Honesty
 - Commitment
 - Excellence
 - Innovation

Services

Software Development

We think of our clients as our partners, we believe in "offering a solution" for his business. We know that not all problems are the same, and that for each different client there is a different need. For that reason our proposal is to work with the right balance of methodologies and always use the technology that better fits the customer's business requirement, involving the client in the solution development, working with short iterations to increase the feedback and improving the value-creation return times.

Information Technology Outsourcing (ITO)

We count with qualified experts in different technologies with a great background experience. Internal training cycles allow us to improve our skills and stay updated with the latest technologies, integrating knowledge and experience in development methodologies, programming languages, database engines, different architectures and frameworks. We offer this services in two ways: on-shore and off-shore.

Web Testing Automation

Using an application developed by us which works over Selenium, a great testing system, we can customize the testing for a particular web application.
